## [NEWS: Virtual Exhibition goes live](#)

by [Teresa Belkow](#)

As part of the means to communicate research findings and engage with a wide audience, the cLIMA sin Riesgo project created a travelling exhibition which was [inaugurated in October 2015](#). It has since been repeated in several locations in Lima - where the action-research is undertaken - as well as in Quito, Ecuador during the [Habitat III](#) conference and in [London](#).

To share the exhibition with even more visitors, no matter what location you might have, we have created a [virtual exhibition](#) which can be accessed from any part of the world on our website. The exhibition content has been updated since the first inauguration and you can browse through the Online Story Maps, drone images and 3D models of Barrios Altos and José Carlos Mariátegui and see the latest videos. The informative panels explain the project methodology and have the objective to illustrate the invisible connections between urban development in Lima and the creation, reproduction and accumulation of everyday and episodic risks.

Find the virtual exhibition in the website menu under OUTPUTS > Virtual Exhibition 360° or this direct link: <http://bit.ly/2hl51uL>

Welcome and enjoy the visit.
