NEWS: Official launch of the Online Story Maps by Teresa Belkow

The cLIMA sin Riesgo Online Story Maps is an interactive tool that visualises our research and is based on the surveys made by the project in the end of the year 2015 as well as other official sources. The purpose of the surveys was to understand and visualise how risk traps are formed and the kind of investment that goes in to making a place habitable and/or mitigate everyday risks. Moreover it was important that citizens themselves tell the story of everyday risks in the area where they live, hence why we have used images and videos that tell the stories. The cLIMA sin Riesgo research project conducts its research in two areas of Lima with very distinctive characteristics: Barrios Altos in the district Cercado de Lima, part of the Historic Centre of Lima; and José Carlos Mariátegui on the periphery of the district San Juan de Lurigancho which is the district with the largest population in Peru.
