Launch of the "Global Trends in Renewable Energy Investment report 2019" on September 5ht 2019

A Decade of Renewable Energy Investment Led by Solar

Global investment in new renewable energy capacity from 2010 to 2019 is on course to hit USD 2.6 trillion by the end of this year, with more gigawatts of solar power capacity installed than any other generation technology. According to the Global Trends in Renewable Energy Investment 2019 report this investment is set to have roughly quadrupled renewable energy capacity (excluding large hydro) from 414 GW at the end of 2009 to just over 1,650 GW when the decade closes at the end of this year.

The Global Trends in Renewable Energy Investment report is commissioned by the UN Environment Programme in cooperation with Frankfurt School-UNEP Collaborating Centre for Climate & Sustainable Energy Finance and produced in collaboration with BloombergNEF. It is supported by the German Federal Ministry for the Environment, Nature Conservation, and Nuclear Safety.

The report is available at: https://fs-unep-centre.org/research/report
